

DANIEL OKOH YEBOAH

Full-Stack & AI Application Engineer

Accra, Ghana | +233 50 332 3739 | danielyboah777@gmail.com
linkedin.com/in/daniel-okoh-yeboah | github.com/Heights001

PROFESSIONAL SUMMARY

Full-stack and AI application developer who designs, builds, and ships production web and mobile products from architecture through deployment. Experienced across fintech, e-commerce, and AI-powered platforms, and applying modern AI engineering practices including retrieval-augmented generation (RAG) and agentic workflows. Seeking an entry-level Software Engineer role to bring this building experience into a team environment while continuing to grow.

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, TypeScript, Python

Frontend: React/Vite, React Native, TypeScript, TailwindCSS, TanStack Query, PWA development

Backend: Node.js, Express.js, FastAPI, SQLAlchemy, Pydantic, Firebase, REST API design, authentication & security hardening

Data & Infra: PostgreSQL, MongoDB, SQLite, Redis, Alembic migrations, Docker, Railway, Vercel

AI Engineering: Retrieval-Augmented Generation (RAG), agentic AI, prompt engineering, provider-agnostic LLM integration (OpenRouter, Google AI Studio)

Tools: Git/GitHub, Postman, Docker, version control workflows, Claude code, VS code

RECENT PROJECTS

Culture Currency — AI Cultural Heritage Platform *July 2026 – Present*

React, TypeScript, Python, FastAPI, TailwindCSS

- Building an AI-powered platform for Ghanaian culture, tourism, and language as part of the Codetrain AI Accelerator Program.
- Developing a RAG-based chatbot that grounds answers to cultural and historical questions in curated external knowledge sources for accuracy.
- Structured the build as a milestone-based AI engineering curriculum, progressing from prompt engineering through RAG to agentic systems.

RoundUp — AI-Powered Digital Savings App *March 2025 – June 2026*

React, Vite, TypeScript, FastAPI, PostgreSQL, Redis, Paystack/Hubtel MoMo API

- Built a full-stack "susu" (spare-change savings) PWA with an AI savings advisor, deployed to Vercel and Railway for development/demo testing.
- Designed and built mobile money payment integration (Hubtel and Paystack) and PIN-based security hardening, currently in development with end-to-end flows not yet live.
- Designed the data layer using strict decimal-based arithmetic for all monetary values and fail-closed security state to protect user funds.

True Trace — Full-Stack Verification App *Jan 2026 – March 2026*

React, JavaScript, TailwindCSS, Firebase, SightEngine API

- Built a full-stack application integrating a third-party image analysis API (SightEngine) with a Firebase backend, as part of the Codetrain bootcamp.
- I designed scalable architecture emphasizing clean API integration and component-based design.

EDUCATION

Bawjiase Senior High School *2013 – 2016*

Business track — WASSCE

CERTIFICATIONS

Certification in Software Engineering — Codetrain, 2023
